

DEFENDA inflatable fenders deliver extreme durability, whilst remaining light and easily handled. They deflate to approximately 10% of their inflated volume, so there's no need to compromise on fender size, for lack of storage.

Choosing fender size, type and quantity depends on a number of factors, such as yacht size and design. Additionally, the berthing environment can also influence the decision. The following table gives general guidance for different types and sizes of yacht, but if you would like further advice, please don't hesitate to get in touch. Please note that the Product Code comprises the Metric measurements (Diameter followed by Length).
